

Monitoring and Controlling Industrial Processes

Second Edition

Marvin D. Silbert and Henry K. Miyamoto

2002
ISBN 0-9695133-1-3

Monitoring and Controlling Industrial Processes

Table of Contents

Preface	i
Legal Notice	ii
Table of Contents	iii
1 Why Do We Need to Look Deeper?	1
1.1 Troubleshooting	2
1.2 Historical Data	3
1.3 Performance Indicators	4
2 Data Formats	5
2.1 Tabulation	6
2.1.1 Significant Figures	6
2.2 Graphical Trends.....	7
2.2.1 Scatter Plots.....	7
2.2.2 Runs Charts	7
2.2.3 Curve Fitting	8
2.2.4 Auto-Scaling.....	8
2.2.5 Multi-Parameter Plotting.....	9
2.3 Histograms.....	9
3 Data Distributions	12
3.1 The Normal Distribution.....	12
3.2 The Poisson Distribution.....	17
3.3 The Binomial Distribution	19
3.4 Combining and Comparing Distributions	22
3.5 Precision, Accuracy, Bias and Repeatability.....	26
4 Medians and Percentiles	29
4.1 Percentiles.....	29
4.2 Data Sorting.....	29
4.3 The Box and Whisker Plot.....	30
5 Time-Series Analysis	32
5.1 Random Movements	32
5.1.1 Positive First Difference Test	32
5.1.2 Turning Points Test.....	32
5.1.3 Runs Test.....	33
5.2 Periodicity.....	35
5.3 Trends	35
6 Statistical Process Control	36
6.1 Process Capability	36
6.2 Control Charts.....	38
6.2.1 Moving Averages.....	43
6.3 Median Control Chart	45
6.4 CuSum Control Chart	46
6.5 Sum and Difference Control Charts.....	46
6.6 Attribute Control Charts	47
6.6.1 Control Charts for Defects.....	47

6.6.2	Control Charts for Defectives.....	49
6.7	What do you do with a bad data point?.....	51
7	The Electronic Log Sheet.....	53
7.1	Off-the-Shelf Products.....	56
7.2	Do More than Plot Data.....	56
7.2.1	The Appearance is Important.....	58
7.2.2	Incorporating the Graphics into the Text.....	59
7.2.3	Significant Figures.....	60
8	Applications in the Field.....	61
8.1	Laboratory Samples vs. Field Instrumentation.....	61
8.1.1	Cost.....	61
8.1.2	Reliability.....	61
8.1.3	Availability.....	61
8.1.4	Sensitivity.....	62
8.1.5	Service Requirements.....	62
8.1.6	Calibration and Stability.....	62
8.2	Monitoring the Controlled System.....	63
8.2.1	If all additions are stopped.....	63
8.2.2	Removal process is stopped.....	64
8.2.3	Isolating the system.....	65
8.2.4	Transients.....	65
8.3	Mode of Addition.....	65
8.3.1	Continuous Addition:.....	65
8.3.2	Intermittent or Batch Addition:.....	65
8.4	Steady-State vs. Batch Operation.....	66
8.5	The Continuously Varying Process.....	68
8.6	Relationships Among Parameters.....	69
9	Applying Quality Methods.....	70
9.1	Quality Assurance.....	70
9.1.1	Established Procedures.....	70
9.1.2	Repeatability, Reproducibility and Bias:.....	71
9.1.3	Record Keeping:.....	71
9.1.4	Chain of Command:.....	71
9.1.5	QA Manual.....	72
9.1.6	ISO-9000 Compliance.....	72
9.2	Introducing a Statistically-Based Program.....	73
9.2.1	Continuous Processes.....	73
9.2.2	Batch Processes.....	75
9.2.3	Linking Statistical and Quality-Assurance Programs.....	76
9.3	Meeting Performance Indicators.....	76
9.4	Troubleshooting and Assigning Priorities.....	76
9.4.1	Cause-and-Effect Analysis.....	76
9.5	Assigning Priorities.....	78
9.6	A Concluding Thought.....	79
	Bibliography.....	80
	Index.....	81
	Appendices.....	83

Rev: 2007-May-27

Table of Contents

Table of Contents.....	i
INTRODUCTION	1
1 What is this Liquid called Water?	2
1.1 The Hydrologic Cycle.....	2
2 Why Do We Need Water Treatment?	8
2.1 Scaling	8
2.2 Corrosion	15
2.3 Microbiological Species.....	25
2.4 Natural Organic Material	27
2.5 Hydrocarbons.....	28
2.6 Solids	29
2.7 ... in the Real World.....	31
WORKING WITH WATER.....	32
3 Disinfection	33
3.1 Chlorination	33
3.2 Dechlorination.....	35
3.3 Alternative Biocides.....	36
4 Solids Removal	39
4.1 Clarification	39
4.2 New and Specialized Clarifier Designs.....	42
4.3 Selecting The Chemistry For The Clarification Process	44
4.4 Lime Softening.....	45
4.5 Particle Filtration	49
4.6 Membrane Filtration - Microfilters	57
5 Organic Removal.....	58
5.1 Processes to Separate Oil and Water	58
5.2 Adsorption	60
5.3 Biological Treatment.....	62
5.4 Ion-Exchange Resins.....	62
5.5 Alumina, Silica	63
5.6 Ultrafiltration	63
6 Demineralization / Deionization.....	64
6.1 Ion Exchange	64
6.2 Electrodeionization	77
6.3 Reverse Osmosis	80
6.4 Electrodialysis.....	87
6.5 Evaporative Processes.....	88
6.6 Desalination	89
7 Chemical Additions to the System	92
7.1 Acid Addition to Reduce Scaling when Water is Heated.....	92
7.2 Lime Addition of Counteract Soft-Water Corrosion.....	93
7.3 Crystal Modifiers / Sludge Conditioners to Counteract Scaling	93
7.4 Chelant Treatment.....	95
7.5 Chemical Feed Equipment	95
7.6 Chemical Feed Kinetics and Equilibrium	99
8 Optimizing the Water-Treatment Plant.....	103

8.1	Matching the Plant to the Water.....	103
8.2	Storage and Distribution Of DI Water	108
8.3	Moving toward Zero Liquid Discharge.....	108
8.4	Zero Liquid Discharge	110
8.5	Make or Buy?.....	111
CLEANING AND MAINTENANCE		113
9	System and Component Cleaning.....	114
9.1	When is a Cleaning Required.....	114
9.2	Off-Line Procedures.....	115
9.3	On-line Chemical Treatment.....	121
9.4	Mechanical Cleaning Systems	121
9.5	Clean-Up of the Water	123
COOLING WATER TREATMENT.....		126
10	Classification of Cooling Systems	127
10.1	Contact Cooling	127
10.2	Non-Contact Cooling	128
10.3	The Once-Through Cooling Systems.....	130
10.4	The Open-Recirculating System	132
10.5	The Closed Recirculating System	136
10.6	... and in the Real World	136
11	Chemical Treatment of Cooling Systems.....	141
11.1	Once-Through Systems.....	141
11.2	Open-Recirculating Systems	143
11.3	Closed Systems	147
12	Building Cooling Systems.....	151
12.1	The Mechanical or Compression Chiller	151
12.2	The Absorption Chiller	153
12.3	HVAC systems.....	154
12.4	Free Cooling.....	154
12.5	Refrigeration and Ice Making	156
12.6	HVAC Chiller Performance.....	156
13	Steam Condensers	164
13.1	Condenser Leakage.....	165
13.2	Measuring Condenser Performance	169
BOILER WATER TREATMENT.....		176
14	Boiler Design and Operation.....	177
14.1	Boilers and Boiler Systems	177
14.2	Boiling As a Concentrating Mechanism	180
14.3	Boiler Mass Balance	182
14.4	Blowdown.....	185
14.5	Condensate Recycle	189
14.6	Carryover in Steam	191
14.7	Shutdown / Start-Up / Storage	194
14.8	The Need for Chemical Treatment.....	196
14.9	The Better the Water, the Better the Control	199
15	Boiler Alkalinity and pH Control	202
15.1	Alkalinity Control for Carbon Steel.....	202
15.2	Increasing System Alkalinity	205
15.3	Choosing an Amine to Give a Specified pH	209
15.4	Dissolved Oxygen Control.....	215
15.5	Oxidizing Chemistry	220

16	Treatment of Low and Medium-Pressure Boilers.....	223
16.2	Erosion-Corrosion / Flow-Accelerated Corrosion	230
17	Treatment of High-Pressure Boilers.....	231
17.1	All Volatile Treatment (AVT)	231
17.2	Oxygenated Treatment (OT).....	231
17.3	Phosphate.....	231
17.4	Optimizing High-Pressure Phosphate Programs	240
17.5	Hideout.....	241
17.6	Monitoring and Controlling an EPT Program.....	244
	INDUSTRY APPLICATIONS.....	250
18	Oil and Gas	251
18.1	Oil-Containing Streams.....	251
18.2	Produced Water.....	252
18.3	Refinery Process Waters.....	253
18.4	Treatment of Produced and Waste Waters.....	254
19	Metal Production and Finishing Industries	256
19.1	Metallic Wastes	256
19.2	Sludge Dewatering.....	258
20	Sanitary Wastes / Sweetwater	259
20.1	Aerobic Processes	259
20.2	Anaerobic Processes	259
21	Alkaline Processes	263
21.1	Characteristics of High-pH Systems	265
	ALPHABETICAL INDEX	267

Rev: December 2006
